## Observation(s)

Today, we investigated one of the children's "wonder" questions- how much does a Bear weigh? We each weighed ourselves, added up all of our weights and compared it with the weight of a polar bear. Throughout our investigation, we discovered that and I don't for bear weighs 1200 pounds and a baby polar bear what is 25 pounds. From our findings, we discovered that we all weigh more than a baby bear and all together weigh less than an adult polar bear.
